thiazide-sensitive, electroneutral sodium-chloride cotransporter.";
Proc. Natl. Acad. Sci. US. A. 90:2749-2753(1993).
-I- FUNCTION: ELECTRICALLY SILENT TRANSPORTER SYSTEM WHICH IS A
MEDIATOR OF SODIUM AND CHLORIDE REABSORPTION.
-I- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.
-I- SIMILARITY: BELONGS TO THE SLC12A FAMILY OF TRANSPORTERS.

Indentification and sequencing of pyrG, the CTP synthetase gene of Azospitilum brasilense Sp7.";
FEMS Microbiol. Lett. 115:723-738(1994).
I- CATALYTIC ACTIVITY: ATP + UTP + GUTAMINE = ADP + ORTHOPHOSPHATE.
CTP (AMMONIA CAN REPLACE GLUTAMINE).
I- EMEXIME REGULATION: ACTIVATED BY GTP AND INHIBITED BY CTP.
I- PATHWAY: LAST STEP IN PYRIMIDINE BLOSYNTHESIS.
I- SIMILARITY: TO OTHER SPECIES CTP SYNTHASE.
I- SIMILARITY: THE GATASE DOMAIN BELONGS TO TYPE-1 GLUTAMINE
AMIDOTRANSFERASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            01-DEC-1992 (Rel. 24, Created)

Biol. Chem. 266:3246-3251(1991).

-! PUOTION: MAY BE NECESSARY FOR SOME GENERAL ASPECT OF COLONIC EPITHELIAL PHENOTYDE.

-! SUBCELLULAR LOCATION: NUCLEAR.
-! TISSUE SPECIFICALLY: INTESTINE; EXPRESSED SPECIFICALLY IN GUT EPITHELIUM WHERE IT IS NOT RESTRICTED TO A PARTICULAR CELL LINEAGE. ABUNDANT EXPRESSION IS SEEN IN THE PROXIMAL COLON WITH SLIGHTLY LOWER LEVELS IN DISTAL COLON. EXPRESSION IN THE PROXIMAL COLON IS NOT RESTRICTED EITHER TO A PARTICULAR CELL LINEAGE OR STAGE OF DIFFERENTIATION WHILE IN THE DISTAL COLON IT SIN MORE STAGE OF DIFFERENTIATION WHILE IN THE DISTAL COLON IT IS MORE ABUNDANT IN THE DIFFERENTIATED CELLS TOWARDS THE TOP OF THE CRYPT.
-! SIMILARITY: BELONGS TO THE CAUDAL FAMILY OF HOMEOBOX PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SECHENCE FROM N.A.

NyAlternate names: hypothetical protein YM8021.05c
C;Species: Saccharomyces cerevisiae
C;Species: Saccharomyces cerevisiae
C;Species: Saccharomyces cerevisiae
C;Accession: S54586
S;Pearson, D: Bowman, S.
Submitted to the EMBL Data Library, May 1995
A;Reference number: S54582
A;Accession: S54586
A;Molecule type: DNA

FUNCTION: THIS IS THE CATALYTIC COMPONENT OF THE ACTIVE ENZYME, WHICH CATALYZES THE HYDROLYSIS OF ATP COUPLED WITH THE EXCHANGE OF	NA & K IONS ACROSS THE PLASMA MEMBRANE. THIS ACTION CREATES THE ELECTROCHEMICAL GRADIENT OF NA & K, PROVIDING THE ENERGY FOR ACTIVE TRANSFORT OF VARIOUS NUTRIENTS. CRAALYTIC ACTIVITY: ATP + H(12)O + H(+)(IN) + NA(+)(OUT) = ADP +	PHOSPHATE + H(+)(OUT) + NA(+)(IN). SUBDNIT: COMPOSED OF THREE SUBUNITS: ALPHA (CATALYTIC), BETA	AND CAPTURE LOCATION: INTEGRAL MEMBRANE PROTEIN. SIMILARITY: BELONGS TO THE CATION TRANSPORT ATPASES FAMILY (E1-E2 ATPASES). "The complete genome sequence of the gastric pathogen Helicobacter
                        pylori.";

Mature 388:539-547(1997)

-!- CATALYTIC ACTIVITY: DETHIOBIOTIN + (S) = BIOTIN

-!- CATALYTIC ACTIVITY: DETHIOBIOTIN BIOSYNTHESIS PATHWAY.

-!- PATHWAY: LAST STEP IN BIOTIN BIOSYNTHESIS PATHWAY.

-!- SIMILARITY: BELONGS TO THE BIOTIN AND LIPOIC ACID SYNTHETASES
FAMILY.

                                                                                                                                                                                                                                                                                                                                                     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 16,

US-08-474-140-11

Sequence 11. Application US/08474140

Patent No. 5721127

GENERAL INFORMATION:

PAPLICANT: DEMERER, PHILIPPE

APPLICANT: DEMERER, PHILIPPE

APPLICANT: DEMERER, PHILIPPE

TITLE OF INVENTION: PULLULANASE, MICROORGANISMS WHICH

TITLE OF INVENTION: PULLULANASE AND THE USES THEREOF

TITLE OF INVENTION: PULLULANASE AND THE USES THEREOF

TITLE OF INVENTION: PULLULANASE AND THE USES THEREOF

TOTHER OF SEQUENCES: 15

CORRESPONDENCE ADDRESS: 15

CONPUTER: OS SECRET, N.W., SUITE 200

STATE: D.C.

STATE: D.C.

COMPUTER: ELOPDY disk

COMPUTER: IBM PC COMPATIBLE

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC COMPATIBLE

COMPUTER: IBM PC COMPATIBLE

SOFTWARE: PAPLICATION DATE: 05-014-1995

CLASSIFICATION NUMBER: 4121-41

TELECOMMUNICATION INFORMATION:

REGISERRATION NUMBER: 37,136

TELECOMMUNICATION INFORMATION:

REFERENCE/DOCKET NUMBER: 4121-41

TELECOMMUNICATION INFORMATION:

REFERENCE/DOCKET NUMBER: 37,136

        The invention provides isolated outer membrane proteins (OMP) from Brilithia chafeensis and E. canis. The E. Chaffeensis proteins form part of the OMP family and consist of proteins OMP-1, -1(B to Z) shown in AAX'06943-958. The E. canis proteins form part of the P30 family and consist of proteins shown in AAX'06599-970. The proteins and genes are used to detect E. chaffeensis in patients and E. canis in dogs.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Composition containing nucleic acid encoding rickettsial antigenuseful for, e.g. stimulating protective immune response in humans or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This is the full-length variable surface antigen VSA3 protein of Ehrlichia chaffeensis. Its amino acid sequence was deduced from a partial open reading frame (ORF5) of a genomic locus (see AAV07179) of E. chaffeensis that was obtained on the basis of homology to the major antigenic protein MAPI (see AAW1088) of Cowdria ruminantium. This genomic locus included 5 ORFS encoding similar, but non-identical proteins (see AAW51081-95). A claimed composition comprises a nucleic acid (see AAW51075-82) encoding a polypeptide (see AAW51089-99) that elicits a protective immune response against rickettsial pathogen. The nucleic acid is used, in human or veterinary medicine, in vaccines to protect against Rickettsia, Ehrlichia, Anaplasma and Cowdria species. The Ehrlichia antigenic
                                                                                                                                                   .;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention provides isolated outer membrane proteins (OMP) from Ehrlichia chafeensis and E. canis. The E. chaffeensis proteins form part of the OMP family and consist of proteins OMP-1, -1(B to Z) shown in AAY06943-958. The E. canis proteins form part of the P30 family and consist of proteins shown in AAY06959-970. The proteins and genes are used to detect E. chaffeensis in patients and E. canis in dogs.
                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

antigen 3 (VSA3) isolated from Ehrlichia chaffeensis, which has similarity to major antigen protein (MAP). The MAP polynucleotides and polypeptides are useful as vaccines for conferring immunity to rickettsia infection, including Cowdria ruminantium causing heartwater. The MAP polynucleotides may be used as molecular markers in nucleic acid analysis procedures, and to produce the MAP polypeptides, which may be used to raise antibodies that are reactive with the polypeptides. The nucleic acids may further be used as probes to identify complementary sequences within other nucleic acid molecules or genomes, where such probes can be applied to identify or distinguish infectious strains of organisms in diagnostic procedures or in rickettaial research where identification of particular organisms or strains is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequence represents the amino acid sequence of variable surface
                                                                                                                                                                                                                                                                                                                                                                                                       New MAP2 genes and polypeptides useful as vaccines for conferring immunity to human and animal rickettsial diseases, e.g. heartwater as molecular markers in nucleic acid analysis procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Outer membrane protein; OMP; Ehrlichia chafeensis; E. canis; P30; detection; dog.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    antigenic protein 1 (MPP) of Ehrlichia sp. The MAPI gene may be used in a vaccines to protect animals or humans against rickettsial diseases caused by a organisms of Rickettsia sp., Ehrlichia sp., Anaplasma sp. or Cowdria sp. The vaccine elicits an immune response protective against the rickettsial pathogen. The nucleic acid vaccines can be driven by the human cytomegalvoirus (HCW) enhancer-promoter. Cowdria ruminatium genes designated map 2, Ihworf3, 4hworf1, 18hworf1 and 3gdorf3 may be used in therapeutic and diagnostic applications. The polypeptides are useful for detecting antibodies associated with infection by a rickettsial pathogen whilst the polynucleotides may be used to detect the presence of rickettsial nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New polynucleotides useful as DNA vaccines for conferring immunity to rickettsial infection e.g. heartwater caused by Cowdria ruminantium, comprises major antigenic protein 1 or 2 gene of rickettsial pathogens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             McGuire TC;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence shows a high degree of similarity to the major
                                                                                                                         Ehrlichia chaffeensis, VSA3; variable surface antigen 3; MAP1; major antigenic protein 1; antirickettsial; vaccine; gene therapy; Rickettsia; Cowdria; Anaplasma; map2; lhworf3; 4hworf1; 18hworf1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Major antigenic protein 1; MAP1; vaccine; immunogenic; rickettsia; infection; heartwater; diagnostic; variable surface antigen; VSA.

                                                                                                                    The invention provides isolated outer membrane proteins (OMP) from brillonia chafeensis and E. canis. The E. chaffeensis proteins form part of the OMP family and consist of proteins OMP-1, -1(B to Z) shown in AAY06943-958 The E. canis proteins form part of the P30 family and consist of proteins shown in AAY06959-970. The proteins and genes are used to detect E. chaffeensis in patients and E. canis in dogs.
                                                                                                                                                                                                                                                                                                                                                                         Homologous 28-kDa protein gene; ECa28SA3; immunoreactive; vaccine; p28 gene; polymorphic multiple gene family; immunoprotective antigen; antibacterial; canine ehrlichiosis; canine tropical pancytopaenia; tick-borne rickettaial disease; serodiagnosis.

The patent relates to homologous 28-KiloDalton (KDa) protein genes of Ehrlichia canis, designated ECa28SA1, ECa28SA3, ENCA28-1 and and contained in a single locus of 5.592 kb. The 28-KDa proteins are immunoreactive with anti-E. can's serum hence are important against E. can's infections such as canine ehrlichiosis in dogs. Canine ehrlichiosis, also known as canine tropical parcytopeania, is a tick-borne rickettsial disease of dogs. ECa28-1 is conserved amongst different strains of E. canis and hence useful for serodiagnosis of canine ehrlichiosis. The present sequence is a E. canis ECA28SA3 30-KDa protein which is post-translationally modified to a mature 28-KDa protein by cleavage of N-terminal signal sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Composition containing nucleic acid encoding rickettsial antigen - useful for, e.g. stimulating protective immune response in humans or animals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence shows a high degree of similarity to the major antigenic protein 1 (MAP1) of Ehrlichia sp. The MAP1 gene may be used in a vaccines to protect animals or humans against rickettsial diseases caused by a organisms of Rickettsia sp., Ehrlichia sp., Anaplasma sp. or Cowdria sp. The vaccine elicits an immune response protective against the rickettsial pathogen. The nucleic acid vaccines can be driven by the human cytomegalovirus (HCMV) enhancer-promoter. Cowdria ruminatium genes designated map 2, Ihworf3, 4hworf1, 18hworf1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New polynucleotides useful as DNA vaccines for conferring immunity to rickettsial infection e.g. heartwater caused by Cowdria ruminantium, comprises major antigenic protein 1 or 2 gene of rickettsial pathogens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        McGuire TC;
partial open reading frame (ORF4) of a genomic locus (see AAV07179) of E. chaffeensis that was obtained on the basis of homology to the major antigenic protein MAPI (see AAW1088) of Cowdria ruminantium. This genomic locus included 5 ORFs encoding similar, but non-identical proteins (see AAW51091-95). A claimed composition comprises a nucleic acid (see AAW51075-82) encoding a polypeptide (see AAW51088-99) that elicits a protective immune response against rickettsial pathogen. The nucleic acid is used, in human or veterinary medicine, in vaccines to protect against Rickettsia, Ehrlichia, Anaplasma and Cowdria species. The Ehrlichia antigenic associated with Ehrlichia infection (claimed).

The MAP polynucleotides and polypeptides are useful as vaccines for conferring immunity to rickettisia infection, including Cowdria rumainantium causing heartwater. The MAP polynucleotides may be used as molecular markers in nucleic acid analysis procedures, and to produce the MAP polypeptides, which may be used to raise antibodies that are reactive with the polypeptides. The nucleic acids may further be used as probes to identify complementary sequences within other nucleic acid molecules or genomes, where such probes can be applied to identify or distinguish infectious strains of organisms in diagnostic procedures or in rickettsial research where identification of particular organisms or strains is
and 3gdorf3 may be used in therapeutic and diagnostic applications. The polypeptides are useful for detecting antibodies associated with infection by a rickettsial pathogen whilst the polynucleotides may be used to detect the presence of rickettsial nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New MAP2 genes and polypeptides useful as vaccines for conferring immunity to human and animal rickettsial diseases, e.g. heartwater, or as molecular markers in nucleic acid analysis procedures
                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence represents the amino acid sequence of variable surface
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Major antigenic protein; MAP; vaccine; immunogenic; rickettsia; infection; heartwater; diagnostic; variable surface antigen; VSA.

The invention provides isolated outer membrane proteins (OMP) from behilding chafeensis and E. canis. The E. chaffeensis proteins form part of the OMP family and consist of proteins OMP-1, -1(B to Z) shown in AAY06943-958. The E. canis proteins form part of the P30 family and consist of proteins shown in AAY06959-970. The proteins and genes are used to detect E. chaffeensis in patients and E. canis in dogs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Outer membrane protein; OMP; Ehrlichia chafeensis; E. canis; P30; detection; dog.

The E. chaffeensis proteins form part of the OMP family and consist of proteins OMP-1, -1(B to Z) shown in AAY06943-958 The E. canis proteins form part of the P30 family and consist of proteins shown in AAY06959-970. The proteins and genes are used to detect E. chaffeensis'in patients and E. canis in dogs.

The present sequence shows a high degree of similarity to the major antigenic protein 1 (MAP1) of Ehrlichia sp. The MAP1 gene may be used in a vaccines to protect animals or humans against rickettsial diseases caused by a organisms of Rickettsia sp., Ehrlichia sp., Anaplasma sp. or Cowdria sp. The vaccine elicits an immune response protective against the rickettsial pathogen. The nucleic acid vaccines can be driven by the human cytomegalovirus (HCMV) enhancer-promoter. Cowdria ruminatium genes designated map 2, 1hworf3, 4hworf1, 18hworf1 and 3gdorf3 may be used in therapeutic and diagnostic applications. The polypeptides are useful for detecting antibodies associated with infection by a rickettsial pathogen whilst the polynucleotides may be used to detect the presence of rickettsial nucleic acids.
nucleic acid (see AAV07176-82) encoding a polypeptide (see AAW51088-99) that elicits a protective immune response against a rickettsial pathogen. The nucleic acid is used, in human or veterinary medicine, in vaccines to protect against Rickettsia, Ehrlichia, Anaplasma and Cowdria species. The Ehrlichia antigenic polypeptides can be used diagnostically to detect antibodies associated with Ehrlichia infection (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New polynucleotides useful as DNA vaccines for conferring immunity to rickettsial infection e.g. heartwater caused by Cowdria ruminantium, comprises major antigenic protein 1 or 2 gene of rickettsial pathogens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mahan SM, McGuire TC;

                                                                                The invention provides isolated outer membrane proteins (OMP) from Ehrlichia chafeensis and E. canis. The E. chaffeensis proteins form part of the OMP family and consist of proteins OMP-1, -1(B to Z) shown in AAY06943-958. The E. canis proteins form part of the P30 family and consist of proteins shown in AAY06959-970. The proteins and genes are used to detect E. chaffeensis in patients and E. canis in dogs.
                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Composition containing nucleic acid encoding rickettsial antigen - useful for, e.g. stimulating protective immune response in humans or

The VSA5 amino acid sequence was deduced from a partial open reading frame (ORFS) of a genomic locus (see AAN07179) of E. chaffeensis that was obtained on the basis of homology to the major antigenic protein MAPI (see AAW51089) of Cowdria ruminantium. This genomic locus included 5 ORFs encoding similar, but non-identical proteins (see AAW51091-95). A claimed composition comprises a
